- Responsible for the delivery and budget of several backend ordering systems encompassing design, development, QA and operational management. Worked with business teams to prioritize roadmap and resolve program issues. This geo-diverse team was able to deliver 100% of planned functionality on-time over a 3-year period.
- Created Self Service ordering system which supports 12% of all Comcast orders across 18 different client partners, first time in company history orders were placed via Comcast.com without

employee assistance.

- Integrated Self Install Kit ordering flows into existing Care Agent tools reducing double data entry of approximately 90k orders per day.
- Developed a system to orchestrate Xfinity Home Security provisioning orders with 3rd party security companies.
- Created business process management engine to govern customer contract acceptance (e911, terms of service, TPV)
- Expanded the use of Agile software development practices from 20 to 150 resources.
- Developed an Operational Excellence mindset across the team resulting in 95% automated order flow through, 95% code test coverage and nightly performance testing.
- Engaged corporate security team to conduct periodic audits of our system and institute continuous improvements.
- Deployed commissioning engine capable of determining sales bounty based on partnership agreements with a 99% accuracy rate.

Responsibilities and Achievements

Assigned to several OSS initiatives relating to device and identity provisioning. Managed a mid-size

development team responsible for customer, care agent and technician facing applications. Collaborated with business sponsors to align roadmaps, provide cost estimates and deliver systems on schedule.

- Introduced the integration of hand held devices for the technician which reduced install times by 50%.
- Launched care agent-facing tools to manage federally mandated regulations, service activation repair and customer identity management.
- Transformed provisioning infrastructure into a multi-site active-active presence. Increased system uptime to 99.99%, reduced deployment overhead and reduced failure group sizes.

Co-authored cable industry specification “Cable Labs – Go2Broadband”

- Created a sales lead system providing real-time product availability and product offer pricing to our indirect sales partners saving over \$1M annually in manual checks.
- Implemented self service PC repair platform (Support.com product)
- Tried and deployed Tealeaf infrastructure to capture real-time XML transactions for diagnostics.
- Due to cable property acquisitions, collapsed several large-scale order systems into Comcast’s infrastructure.
- Deployed the “Self Install Kit” order system company wide reducing need for technician’s assistance.
